

Ckyever Gaviola

ckyevery@gmail.com • ckyever.com • github.com/ckyevery • Australian Citizen

SKILLS

Languages: TypeScript, JavaScript, Python, C#, Informix 4GL, HTML, CSS, SQL

Technologies: React, Express, Git, Linux, Bash, Vite, Microsoft SQL Server, PostgreSQL

EXPERIENCE

Software Integration Engineer - Brock Solutions

May 2025 – August 2025

- Customised baggage handling software for the international terminal at Melbourne Airport, using C# and Microsoft SQL Server to integrate a hardware agnostic platform to custom sensors and conveyors

Software Engineer - Expedient Software by e2open

April 2021 – April 2025

- Architected a native Xero API integration using OAuth 2.0 and Informix 4GL to automate financial data exchange, decommissioning a costly third-party service that was previously handling the integration
- Improved the finance query screen with a tree structure hierarchy increasing its active users by 70%
- Automated transaction reversals by refactoring libraries, saving the support team 50 hours annually
- Engineered an automated customs rates charging process requiring large legacy code cleanup that resulted in an increase in user job processing efficiency by 32%
- Streamlined the bank reconciliation process by building a selection dialog, improving user satisfaction
- Automated the extraction of files from uploaded emails improving user customs declaration speeds
- Designed a system-wide document preview feature by integrating Java libraries into the Informix 4GL codebase, as requested by multiple clients

Junior Software Developer - Expedient Software by e2open

March 2019 – April 2021

- Built a web application for customers to track and manage logistics consignments, using JavaScript and Informix 4GL to create data summaries and graphics, this secured 4 new clients within the first month
- Created dashboard tiles to identify overdue shipment arrivals, improving timeline visibility to the user
- Developed a reset password flow, adhering to best automated email practices to avoid spam filters
- Implemented an interface to ingest XML data from a DHL/Coles external platform to generate job records in the internal system fulfilling a \$100k project

PROJECTS

Yeetyah - yeetyah.pages.dev

github.com/ckyevery/yeetyah

- Chat website using websockets and the publish-subscribe model for real time messaging between users
- Built with TypeScript using React for the frontend, and Node.js, Express, and PostgreSQL in the backend

Where's Wooper? - wheres-wooper.pages.dev

github.com/ckyevery/wheres-wooper

- Fullstack website based on Where's Wally, but with Pokémon from PokéAPI and a timed leaderboard
- Built with JavaScript using React for the frontend, and Node.js, Express, and PostgreSQL in the backend

EDUCATION

The University of Melbourne

December 2018

Bachelor of Science - Major in Computing and Software Systems
